NOTICE TO PUBLIC OF TEMPORARY FREE CHLORINE CONVERSION

What is a Free Chlorine Conversion? A **free chlorine conversion** is a process by which a water system periodically switches its disinfection process from chloramines (a combination of **chlorine** and ammonia) to **free chlorine** in order to improve the long term quality of its drinking water.

Possible Noticeable Effects: There are no associated health risks to this process. The customer may experience times of lower water pressures, possible color and taste and odor problems. The City will attempt to remove the particles, color and odor from the mains through directional flushing.

Is your water safe to drink? Yes, however, should you experience odor or taste in your water, it does not mean it is unsafe to drink. Odors are caused by the free chlorine disinfectant cleansing the system. When opening water faucets first thing in the morning do so in a well ventilated area. Feel free to contact your doctor if you have any concerns.

Questions? If you have water quality concerns please contact Gordon Smith, Public Works Director at 817-626-5421 extension 322 or you can visit us on the web at www.riveroakstx.com. Please do not hesitate to contact us if you have complaints regarding water quality or water appearance. Protecting your health is of the utmost importance to us.
